Django Tutorial Part 2

TOTAL POINTS 9

1. These questions come from the Django project tutorial materials.

    `1 / 1 point`

    What is the default database backend for Django projects when they are first set up?

    ○ PostgreSQL

    ○ MongoDB

    ⦿ sqlite3

    ○ Oracle

    ○ MySQL

    ✓ **Correct**

2. What file contains the list of INSTALLED_APPS in a Django project?

    `1 / 1 point`

    ○ manage.py

    ○ urls.py

    ○ apps.py

    ○ views.py

    ⦿ settings.py

    ✓ **Correct**

3. What does the "python manage.py migrate" command do?

    `1 / 1 point`

    ⦿ Builds/updates the database structure for the project

    ○ Makes a backup copy of db.sqlite3

    ○ Moves the application to a new server

    ○ Moves login sessions to the backing store

    ✓ **Correct**

4. What is the purpose of the models.py file?

    `1 / 1 point`

    ○ To apply a regular expression to the incoming path in the request object

    ○ To make building views for your application simpler

    ⦿ To define the shape of the data objects to be stored in a database

    ○ To connect your database to the Django administration interface

    ✓ **Correct**

5. What does the "sqlmigrate" option accomplish in a Django application?

    `1 / 1 point`

    ⦿ It lets you see the SQL that will run to effect a migration

    ○ It moves all of your non-SQL data into flat files

○ It moves all of your non-SQL data into flat files

○ It copies all of your SQL into a REST-based API

○ It builds/updates the database structure for the project

✓ **Correct**

---

6. What does the __str__ method in a Django model accomplish? **1 / 1 point**

○ It indicates how strict the storage model will be in terms of column length

○ It improves the strength of the binding between SQL and the model

○ It determines how the model will respond to stress

◉ It lets you specify how an instance of the model will be represented as a string

✓ **Correct**

---

7. What is the difference between the Django shell and a normal interactive Python shell? **1 / 1 point**

○ Only the Python shell can print values

◉ The Django shell loads all of the project objects before starting

○ The Django shell uses JavaScript instead of Python

○ You can run Django commands in a Python shell

✓ **Correct**

---

8. What is the Django command to create a user/password for the admin user interface? **1 / 1 point**

○ MOVE CORRESPONDING INTO USER

◉ createsuperuser

○ INSERT INTO User;

○ //SYSIN DD USER

✓ **Correct**

---

9. What file in a Django application do you edit to make sure a model appears in the admin interface? **1 / 1 point**

◉ admin.py

○ module.py

○ sakaiger.py

○ views.py

✓ **Correct**
